LETTER OF INTEREST
Virginia K-12 Battery Energy Storage Program
Secure Solar Futures | Voltus Battery Network

Date: _____

To: Secure Solar Futures

From: _____
(School Division)

Subject: Notice of Interest in Battery Energy Storage Program

Dear Secure Solar Futures Team:
On behalf of _____, we are pleased to express our interest in exploring participation in the Virginia K-12 Battery Energy Storage Program offered by Secure Solar Futures through the Voltus Battery Network, with funding provided by Voltus and its partner Google.

We understand that this program offers eligible Virginia public K-12 schools the opportunity to host on-site battery energy storage systems at no upfront cost* to the school. The program is intended to help relieve congestion on the electric grid while providing potential energy savings, increased energy resilience, and backup power capabilities for school operations and emergency shelter needs.

By submitting this Letter of Intent, _____confirms its interest in having one or more school facilities evaluated for potential participation in the program.

Preliminary Site Evaluation
We understand that initial eligibility considerations include:

- A facility with peak electrical demand of 200 kW or greater.
- Availability of 12 months of electric utility bills and associated interval usage data.
- Adequate space to accommodate a battery energy storage system.
- Identification of any site-specific resiliency requirements, including whether the facility is designated as an emergency shelter.

We are willing to work with Secure Solar Futures to identify potential facilities and provide available utility information and site details necessary to conduct an initial eligibility and feasibility assessment.

Program Understanding
We acknowledge that:

1. Secure Solar Futures will coordinate the evaluation of potential sites and, for approved projects, manage battery installation, operation, and maintenance.

2. Final participation is subject to site eligibility, technical feasibility, program funding availability, and agreement on definitive project terms.
3. The proposed battery system's size, location, operating requirements, backup power capabilities, and anticipated benefits will be determined through further evaluation.
4. Any project implementation will require appropriate review and approval by the School Division and execution of mutually acceptable agreements.

Nonbinding Expression of Interest
This Letter of Intent is intended solely to express our interest in exploring participation in the program and to support preliminary project evaluation and consideration for the current program opportunity.

This letter does not constitute a binding agreement, financial commitment, authorization to install equipment, or obligation to proceed with a project. Any future participation will be subject to the School Division's applicable approval, procurement, and contracting requirements.

We look forward to working with Secure Solar Futures to evaluate whether this opportunity can benefit our schools and the communities we serve.

Sincerely,
Authorized School Representative
