

InterChange Group, LLC is a warehousing, logistics, and development company based in Harrisonburg, VA.

Going Green While Cutting High Power Costs

Challenge

InterChange came face-to-face with two challenges in 2018. 1) Their cold storage customer, Danone, began requesting more sustainability practices and asked InterChange to think about solar specifically, and 2) InterChange needed to do something about their rising operating costs, especially their power bill.

Solution

InterChange entered into a co-investment lease with Secure Futures Solar. As a result of this agreement, InterChange is now producing 46% of their electricity across four warehouses from solar power. And the best part - they saw energy savings in the first year of production. Ultimately, this partnership helped InterChange make their customers happy while saving money in their long-term operating budget.

PROJECT HIGHLIGHTS

1.6
Megawatts of rooftop solar

— Equivalent to One Year's Production from —

288
Average homes electricity use

900
Tons of coal burned
