

Customer Testimonials

You're in Good Company

"Not only does solar power help the university address its significant commitment to environmental sustainability but our agreement with Secure Solar Futures also allows us to reduce our utility expenses."

David Hale

Vice President for Business and Finance, University of Richmond

"Since we don't have a dedicated fund for anything more than minor roof repairs, the roof restoration meant that we were able to get three of our schools' roofs restored and guaranteed for 25 years and avoid the larger cost of replacing those roofs."

Doug Arnold

Project Specialist, Orange County Public Schools

"I sometimes get asked by the Science Coordinator about what resources we have for project-based opportunities. Always at the top of my list is the data that comes off of the solar systems. It's nice to see students use what we put on the buildings. It's not just something they look at everyday, they can even interact with it."

Lindsay Snoddy,

Deputy Director for the Building Services Department, Albemarle County Public Schools

"I had been looking at going solar for a long time, but as a nonprofit, we were very risk adverse and it didn't seem financially viable until we read about Secure Solar Futures in the news. Our solar array performs well, and it produces more power than we even expected. It's a boring system – it works well, so we don't have to think about it. You don't go home and talk about how great your garbage disposal system works. A boring system is a good system."

Raul Arbelaez

Vice President, Insurance Institute for Highway Safety
